

## Skin Imperfection Post-Procedure Instructions

1. Healing time is short, from a few days to a few weeks. This varies on the size and type of skin irregularity removed. After treatment, the area may be irritated, turn red and scabs will appear. The scabs will slough off on their own.
2. To reduce and minimize healing period, it is important to follow all post treatment instructions carefully.
  - Do not remove the scabs as this may cause hyperpigmentation. The scabs will fall off or disappear within 4-10 days usually. Let this happen naturally. Do NOT hurry along the process.
  - Apply antiseptic and antibacterial lotion after treatment is done.
  - Keep the area dry.
  - Avoid exposure to sun light for at least 3 days after treatment.
  - Do not wear makeup for 24 hours.
  - Use sunblock on the affected area after the first 24 hours.
  - Do not apply peeling or whitening products to the treated area for at least 3 weeks.
3. Some skin imperfections may need an additional treatment to be fully removed.
