

Pre Treatment PiXel8-RF Microneedling

1. Client must reveal any medical conditions such as pregnancy, cold sore and fever blister tendencies, any type of allergy, recent facial peels or surgery, and all current medications (including both prescriptions and over-the-counter products) such as Accutane, tetracycline, hormone replacement therapy, or use of Retin-A.
2. If you have a history of taking Accutane, you must be off of this medication for 6 months prior to having a PiXel8-RF micro-needling treatment
3. The PiXel8-RF Micro-needling treatment may not be performed on a patient if he/she has an electronic implant (Insulin pump, pacemaker, LVAD, etc.).
4. Do not use self-tanning lotions or tanning booths two weeks prior to your PiXel8-RF treatment. Do not sunbathe two weeks prior to your appointment.
5. Do not use any irritating skin care products such as Retin-A or OBAGI for one week prior to treatment.
6. Avoid taking NSAIDs such as Advil, Motrin, Aleve, aspirin for 1 week prior to scheduled procedure.
7. Areas of dental crowns, caps, braces, or other metal dental implants may be more sensitive to the treatment and the clinician may use gauze or a tongue depressor to isolate the area to make the treatment more comfortable. Notify your clinician if you experience this and she will make accommodations.
8. Client must wait 2 weeks after Botox, Dysport or filler injections before having this microneedling treatment.

Post Treatment PiXeI8-RF Microneedling

1. A certain degree of discomfort, redness, and/or irritation during and after treatment is expected. If any discomfort or irritation persists more than 24-hours, please notify the treatment facility.
2. Tiny scabs (of less than 1 mm in diameter) may form 24-72 hours post treatment and may remain for several days. The scabs should not be touched or scratched (even if they itch) and should be allowed to shed naturally.
3. During the first two (2) days following treatment, care should be taken to prevent trauma to the treated site: avoid hot baths, massage, irritating skin care products or exfoliants, etc. The skin should be kept clean to avoid contamination or infection; any mechanical or thermal damage to the area must be avoided such as saunas, working around hot ovens, etc.
4. For burning sensation, spritz the treatment area with a diluted vinegar solution. (1 tsp white vinegar per 8 ounces water)
5. It is important to keep your skin moisturized after the treatment. Aquaphor or a post recovery balm available at Beautiful You are good options.
6. You may have mild swelling for 1-3 days after your treatment. Patients may apply an icepack (NOT direct ice) to the irritated area for 1-2 days in approximately 15-minute sessions 3-4 times per day.
7. Redness for 1-3 days is common. After 12-hours post procedure, the patient may apply a hydrocortisone cream 3-4 times per day to reduce redness. This can be purchased at your local drugstore.
8. Makeup can be applied 12 hours after treatment. Please make sure it is a clean applicator or brush.
9. Avoid prolonged sun exposure or use of tanning bed for at least two weeks after the treatment, as the skin that was treated will be more sensitive to the sun after your radio frequency (RF) treatment.
10. Use a minimum of SPF 30 daily to protect your skin after your treatment.
11. Client can expect redness of skin for a couple of days, slight swelling and then a bronzed look that will shed leaving younger, healthier looking skin.
